

WHAT IS CLAIMED IS:

1. A case for an electronic device, comprising:  
a first protective material that maintains said  
5 electronic device within said case; and  
at least one controlling interface, in electrical  
communication with said electronic device, and disposed  
on said first protective material, through which said  
user can operate an electronic feature of said  
10 electronic device.

2. A case according to claim 1, wherein the  
electrical communication between said controlling  
interface and said electronic device is at least in  
15 part carried out using wireless communication means.

3. A case according to claim 1, further  
comprising:  
a connection port, attached to said first  
20 protective material, for transferring electrical  
signals between said electronic device and said  
controlling interface.

4. A case according to claim 1, further  
25 comprising:  
at least one electrical output jack.

5. A case according to claim 4, wherein said  
electrical output jack is an audio output.  
30

6. A case according to claim 1, further  
comprising:  
an electrical input through which power is provided  
to store a charge for said electronic device.

7. A case according to claim 1, wherein said controlling interface produces numerous command signals, including command signals that operate functions that are not operated by command signals produced from a controlling interface of said electronic device.

8. A case according to claim 1, further comprising:

at least one audio speaker that receives audio signals from said controlling interface.
